The emergence of sip, mpls and new quality of service tools is making carrier grade voice over ip a service reality, and a potentially huge margin booster and revenue driver for service providers. The first edition of carrier grade voice over ip played a roll in voip growth, in less than year becoming an essential tool for carriers working to provide high quality ip telephony. Customer Reviews

This book does a very good job of giving an introduction to the VoIP world. As a professional in the telecom domain, I found this book very useful. Application of VoIP to telco domain as in the case of softswitch architecture for backhaul and the QoS issues that carriers have to deal with is also well covered at a good amount of detail. The book also provides detailed discussion on the protocols. However, I skipped passed these sections and unable to comment if such material was covered well. Overall - a very good book. Highly recommend it.

Top Marks for this highly readable and clear intro to Voice over IP. The subject matter is dealt with in reasonable detail and the author achieves great clarity in explaining difficult technical concepts. He also delves a bit into the history and background which also helps to put the subject matter in context. He even adds a small example of how to go about dimensioning a VOIP network at the end

of the book.

Very easy to understand and has really good material. Author is a genius would like to shake his hand if I get to meet him. Paperback cost is tremendously cheaper than the hard back don't see the point why. Anyways, great book hopefully this gets me a straight A :)

The standards described here but over a decade ago in 2nd Edition are still working today, so IMO the book is still relevant and uptodate. Written when H.323 was predominant, it fully covers SIP and correctly predicted that SIP would prevail. There are the details of codec negotiation, there are complete call flows and all the various standards' frame references are documented. If you want to know how these protocols work, "Carrier Grade Voice Over IP" is classic.
