This text has provided me with an excellent grounding in the field of ecofeminism. The selection of essays included provide a nice range of the various ways ecofeminism is represented in the disciplines and used politically in society. The essays themselves are very clearly written and I found their bibliographies especially helpful in leading me to other more specific sources on the particular foci within this umbrella topic. In particular, I really valued the inclusion of the following selections: Ecofeminism through an Anticolonial Framework (interesting critique of general feminism and a nice example of a politically motivated piece); Ecofeminist Literary Criticism (great bibliography and linkage to other theoretical pieces); and Androcentrism and Anthrpocentrism. I would definitely recommend this text to anyone wanting an introductory overview of ecofeminism.

This is an excellent book for anyone interested in ecofeminist theory. It contains a collection of essays by various authors on ecological problems and how those problems are linked to the oppression of minorities. It contains empirical data to back claims and provides a clear convincing argument for the movement.

The book itself was okay, but the quality was great, came in on time and was spotless.
